

Graham Engineering is looking for a December grad, Spring grad, and/or summer intern that is interested in civil engineering associated with land development projects in Montana and throughout the northwest. Project types include commercial/retail development, subdivision, RV Parks/Camping, and design work associated with Superfund projects. Here's a brief description of responsibilities.

- Coordinating project due-diligence with clients including concept site planning, traffic evaluation, preliminary drainage evaluation, preliminary utility evaluation.
- Grading and Drainage Design including hydrology calculations, detention pond design, underground detention, and stormwater infiltration system design.
- Design of water and sewer main extensions.
- Construction plan preparation for various development projects using Civil 3D.
- Flexible hours, benefits.
- Bozeman based but remote work available.
